

A PATH TO PREVENTION:

State Profile: Arkansas

On-time HPV vaccination protects best. HPV vaccination is routinely recommended at **age 11 or 12 years and may be started at age 9**. HPV vaccination is recommended for everyone ages 9-26. It's not too late to catch up on HPV vaccination. People ages 27-45 are also strongly encouraged to talk with a health care provider to see if HPV vaccination is right for them.

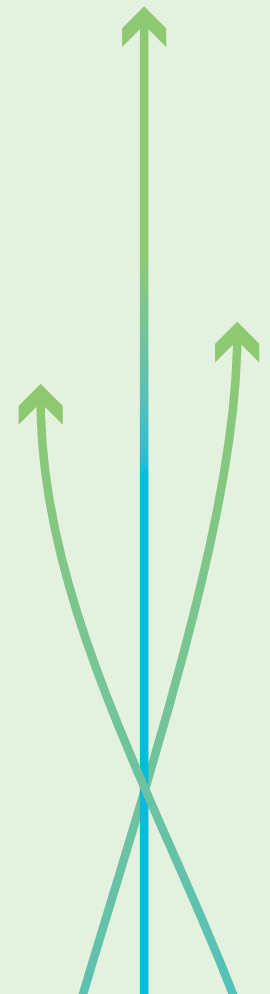

HPV VACCINATION RATES FOR 13-17 YEAR-OLDS AS OF 2023:

Arkansas has increased HPV vaccination coverage of **≥1 dose by 20% and up-to-date (UTD) by 18% since 2016**. However, coverage remains **lower than the U.S. average** and below the Healthy People 2030 goal of 80% UTD. Compared to meningitis and whooping cough (Tdap) vaccines routinely recommended for adolescents, HPV vaccination coverage lags. Arkansas vaccination rates **among 13-17 year olds were 95% for meningitis vaccine and 92% for Tdap vaccine in 2023**.

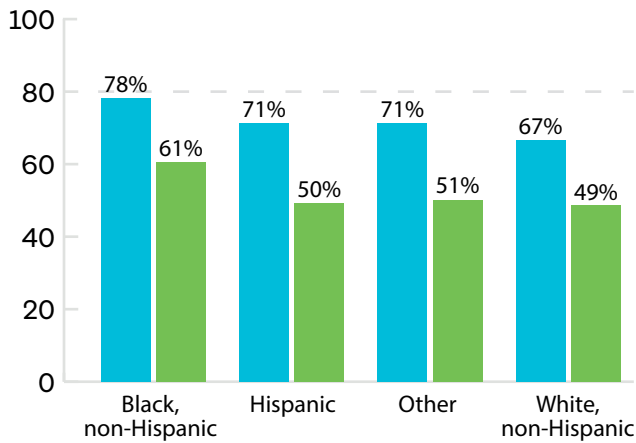

HPV vaccination protects against more than 90% of HPV cancers.

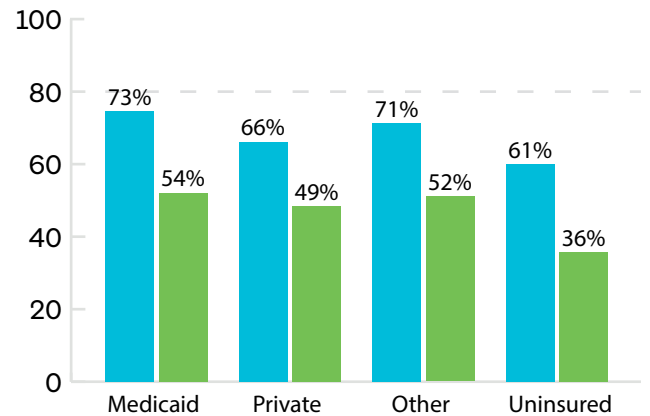

HPV VACCINATION RATES FOR 13-17 YEAR-OLDS AS OF 2022:

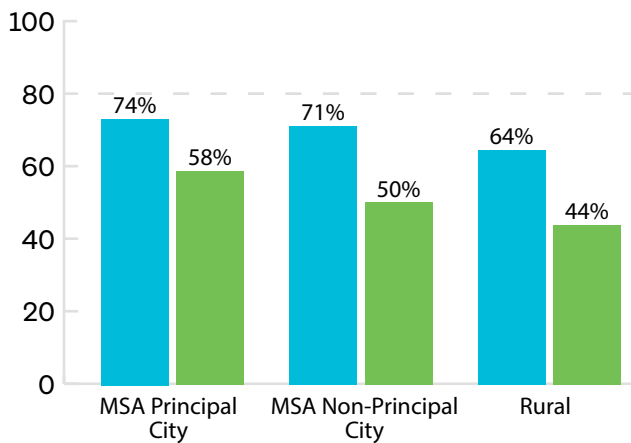

HPV Vaccination by Race/Ethnicity

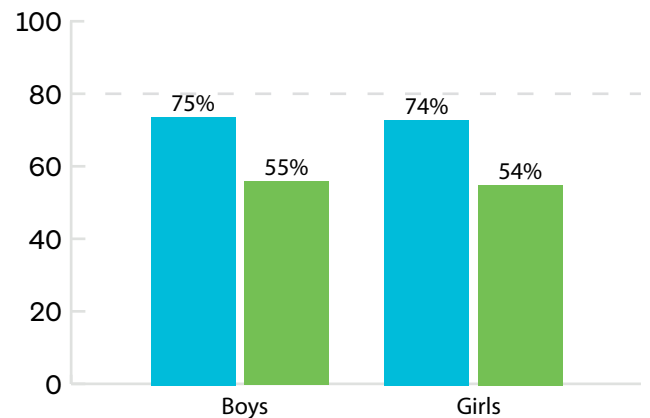

HPV Vaccination by Insurance Coverage

HPV Vaccination by Urbanicity

HPV Vaccination by Sex

----- Healthy People 2030 ■ ≥1 HPV Vaccination ■ HPV Vaccination Up-to-date

HPV vaccination data sources: CDC NIS-TEEN, 2023 accessed in TeenVax View, 2024

Demographic data for 2018-2022 are the most recently available.

HPV CANCERS:

HPV is a common virus linked to six types of cancer. The two most common HPV-associated cancers are oropharyngeal and cervical cancers. **Incidence rates of HPV cancers overall and for oropharyngeal and cervical cancers are higher in Arkansas compared to the U.S. averages.**

New Cases

	All HPV Cancers	Oropharyngeal Cancer	Cervical Cancer
United States Overall	12.5	5.2	7.1
Arkansas Overall	15.4	6.3	9.4
United States	Male: 11.2, Female: 13.9	Male: 9.1, Female: 1.6	Arkansas ranks in the Top 7 nationally in cervical cancer incidence rates.
Arkansas	Male: 12.6, Female: 18.2	Male: 10.7, Female: 2.2	

Incidence rates shown are cases per 100,000 persons.

ACTION STEPS:

Identify and engage key partners in HPV vaccination to develop, implement, and evaluate priority evidence-based interventions to increase HPV vaccination coverage in clinical, community and policy settings in Arkansas:

- Align with existing efforts in Arkansas to build HPV vaccination confidence among the public, especially among parents and caregivers who make vaccination decisions for their children, to optimize impact and increase HPV vaccination by continuing collaborative efforts with the Arkansas Immunization Coalition and the Arkansas Cervical Cancer Task Force.
- Encourage starting HPV vaccination at age 9 to increase series completion by age 13.
- Improve capacity among health care providers (including oral health providers) to recommend and/or administer HPV vaccines and utilize reminder/recall systems for HPV vaccination reminders in clinical settings.
- Identify strategies to improve HPV vaccination coverage for adolescents living in rural areas.
- Explore opportunities to implement school-based strategies to improve HPV vaccination coverage.
- Engage and support state-level partners in the development and implementation of HPV cancer elimination plans.
