

HPV VACCINE: Long-Lasting Cancer Protection

Vaccination prevents over **90%** of cancers caused by HPV.

The HPV vaccination rate is just

- 10% of girls completed their HPV vaccination series in 2017.
- 10% of boys completed their HPV vaccination series in 2017.

Most Common Cancers Caused by HPV

- Cervical cancer occurred in 12.5 women per year.
- Throat cancer occurred in 10.5 people per year.

The HPV vaccine offers future cancer protection for boys and girls.

Preventable Cancers Caused by HPV:

- THROAT
- CERVICAL
- VAGINAL
- VULVAR
- PENILE
- ANAL*

**Includes anal and rectal squamous cell carcinomas.*

Earlier Vaccination is Better

Two doses of HPV vaccine are recommended for **girls and boys ages 11-12**.

However, the two-dose series can be **started as early as age 9**.²

Teens and young adults (15-26) can still receive vaccination, but will require **three doses**.³

Consult your healthcare provider for more information.
